

General Handling Guidelines

The following guidelines refer to the concentrated product in the bottle. They do not apply to the diluted solutions used to clean either between flocks or during the flock.

Handling Guidelines:

1. Do not leave product in direct sunlight for extended periods of time.
2. Avoid pouring/spilling concentrated product onto grasses or other substances such as cardboard, pine needles, leaves, etc.
3. If such a spill should occur, simply dilute thoroughly with water (i.e., if a full gallon of product spills, simply dilute with approximately 10 gallons of water).
4. Diluted product poses no risks.
5. In the event of direct contact with skin surfaces, skin will turn white but will return to normal color soon (usually the same day). There may be a slight stinging sensation as a result of direct skin contact. If skin is contacted, wash the affected area thoroughly and the stinging will dissipate. 
6. If clothing comes in contact with product, remove affected clothing and wash immediately.
7. Avoid contact with eyes (refer to current MSDS for exposure guidelines). 
8. Unused product should be resealed and stored according to label guidelines for use at a later date.

Please visit our website www.proxyclean.com for copies of current MSDS and product labels.
