

Blue²™

Advanced Generation Swine Liquid Solutions

INDICATIONS FOR USE – Administer in the water whenever pigs are dehydrated or show evidence of loss of body weight as a result of weaning, sorting and handling.

DIRECTIONS FOR USE – Administer in the drinking water for pigs showing signs of dehydration, loss in body weight such as after weaning or newly purchased nursery pigs for 36-48 hours. Administer in the drinking water in one of the following ways:

1. **Stock Solution:** (no dilution of liquid with water needed when using a proportioner) – Administer at the rate of 1 or 2 ounces of Blue 2 liquid to each gallon of drinking water (1:128 – 1:64) for 48 hours. The maximum dilution is about 2% (1:50).
2. Add one or two ounces of Blue 2 liquid to each gallon of drinking water

Water Intake (water weighs about 8.33 pounds per gallon):

1. Pigs normally consume between 8-12 percent of their body weight in water, depending upon temperature, stress and disease.
2. Water intake guidelines on a daily basis: 15-20 pound pig - 1/4 to 1/2 gallon; 20-30 pound pig - 1/2 to 3/4 gallon; 30-60 pound pig - 3/4 to 1 gallon.
