

Highly-palatable
isotonic protein and
electrolyte solution
for all swine classes

Tonistry Px

As early as Day 2 of life, Px can be offered to all swine classes by simply combining the dry powder with clean water to form a highly palatable solution.

Tonistry.com

NET WEIGHT
2.2lbs (1kg)

Tonistry Px (Px) dry powder mixes with water to form a highly palatable isotonic protein and electrolyte solution for all swine classes. The isotonic liquid Px solution can be offered to any class of pig from 24 hours of age onward, including pre- and post-weaning, as well as during breeding and finishing stages of production.

Directions For Use:

Read all directions for use before mixing. Px dry powder should not be fed prior to proper mixing. Always use clean feeder pans and prepare fresh solution daily to avoid contamination.

General solution mixing directions:

Add one level scoop (using the enclosed 15g “Px” scoop) of Px dry powder to 1 pint of fresh water to make up the liquid Px solution. Mix thoroughly until the powder is completely dissolved.

Gruel Mixing Directions:

Mix 2 pints Px solution with 1.5 lbs of creep feed to create a gruel to feed 8 pigs.

Recommended Uses:

Farrowing

Provide solution from Day 2 - Day 8 of age (1 pint/litter/day)

Weaning

Begin at 3 days pre-weaning and provide solution for 2 days (1 pint/litter/day); at 1 day pre-weaning, provide gruel per mixing directions. On weaning day + 2 days post-weaning provide gruel per mixing directions

Transportation

Upon arrival provide Px as below two times per day: 2 days solution at 1 gallon per 50 pigs, then 3 days gruel per mixing directions

We recommend pigs have access to fresh drinking water at all times.

Storage

Store Px in the original packaging in a moisture-proof container in a cool, dry place out of direct sunlight. Buyer assumes all responsibility for proper use, storage and handling of this product.

Ingredients:

Dextrose, whey protein concentrate, sodium chloride, citric acid, potassium chloride, glycine, xanthan gum, monosodium phosphate, glutamic acid, monosodium glutamate, natural flavor

Caution! Pigs unable to eat and drink normally or showing symptoms of coma, shock or severe weakness and dehydration should be treated as directed by a veterinarian. Adequate colostrum intake during the first 12-24 hours after birth is essential for healthy, vigorous pigs. This product is not nutritionally complete if administered by itself for long periods of time. It should not be administered beyond the recommended periods without the addition of milk or milk replacer in young pigs.
